

Weather and Traffic for main meetropolitan areas is the great innovation XM Radio introduced. It is mostly up to date, it is always available, you don't need to listen to something you are not interested in just to get the traffic and weather update as you have to do on any regular station even on NPR. XM radio is subscription base and they have to broadcast what their subscribers are interested in, like music, news, sports, plays, and WEATHER AND TRAFFIC. It is a shame to try to put progress on brakes. It never worked and it never will.
